FOR IMMEDIATE RELEASE January 11, 2010

LVM Patient Care Plans, At No Cost to Clients

(Mesa, Arizona) LVM Systems, Inc. has announced a dramatic change in their pricing model for disease management care plans. As of February 1, *all* plans are available *at no additional cost* to LVM customers. The plans include Heart Failure, Chronic Obstructive Pulmonary Disease (COPD), Asthma, Diabetes, Coronary Artery Disease and Medication Compliance.

According to Les Mortensen, President of LVM Systems, "The majority of our call center customers have disease and population management projects on their horizon. It's a "must do" for successful healthcare reform and medical home initiatives. We want our customers to have the advantage of medically-sound care plans which reference the national guidelines and support medical standards of care."

Each care plan contains a rigorous stratification tool to assist care teams in matching the right intensity and frequency to the needs of each program participant. The plans focus on self-management education and early identification of health status changes which are key to avoiding unplanned care and emergencies. Customers can use the patient education materials authored by the American Academy of Family Physicians (AAFP) which exist in the LVM software, or they can link to their own existing education materials. The Centaurus software's robust reporting function supports detailed outcomes analysis and timely communications between the patient, counselor, physician and care team members.
