LVM Systems Releases Centaurus Software on .Net Platform

MESA, Ariz., July 7, 2010 — LVM Systems has announced the release of its Centaurus software on Microsoft's .Net platform. This development gives LVM Systems customers a choice on how they want their Centaurus software to function.

“We believe Centaurus is already the top healthcare call center software solution in the industry,” said LVM Systems’ vice president of .Net applications Jake Johnson. “Adding the .Net platform gives LVM Systems and our customers access to the latest technologies.”

The move to the .Net platform was three years in the making. It also represents a significant investment in staffing and resources.

“We listened to our customers and other call center managers,” said Les Mortensen, LVM Systems’ president and chief information officer. “They said they wanted a .Net option. We made that happen.”

LVM Systems’ Centaurus software is a customizable solution for healthcare call centers. Centaurus was first developed in 1988 and has evolved to meet the ever-changing needs of the healthcare call center industry.

Although it is anticipated that the .Net version of Centaurus will become the primary choice among new customers, LVM Systems will continue to provide support to those customers with the original version.

Moving forward, customers have the option of which platform they want their individualized version of Centaurus to run on.

About LVM Systems

LVM Systems, Inc., a privately held, Mesa, Ariz.-based company, develops and markets software and related Internet products exclusively in the healthcare call center industry. Its primary niche is solutions that support nurse triage, disease management, referral/marketing services, patient transfers, and physician relations management. LVM Systems has proudly served this market since 1988 and has hundreds of healthcare organizations as clients.
